

What Makes Our Goals So Nice? Glad you asked...

The **silk screened target area** is designed for years of fade free life in the sun!

Our backboards are made of $\frac{1}{2}$ " **thick, cast acrylic**, not cheap extruded acrylic with its wavy appearance.

Less expensive goals have backboards that only are $\frac{3}{8}$ " to $\frac{1}{4}$ " thick and require reinforcement near the target area to resist shattering and improve ball response. Thinner backboards just can't deliver the consistent rebound that ours do and our backboards are **guaranteed not to yellow for 10 years!**

We've designed **sturdy, durable, adjustable outdoor basketball goals** that give you the same feel and play of an indoor, gymnasium goal.

Professional quality built for years of trouble-free rugged outdoor play!

We use a **polyester powder coating** that resists corrosion better than any powder coating process in the industry! Our steel is shot blasted, cleaned, and treated and then powder coated with our polyester coating. The result is a rich, heavy-duty finish that can takes years and years out in the elements.

Our **commercial actuator** is rated for over 1000 lbs and uses high-temperature grease and commercial bushings.
